Education

Indian Institute of Information Technology Vadodara

Bachelor of Technology in Computer Science and Engineering – 8.02 CGPA

Aug 2024 – Jun 2028

Vadodara, Gujarat

IBS Global Academy (CBSE)

Class XII – 89.8%

Apr 2022 – Mar 2024

Gandhinagar, Gujarat

Experience

Confrnce | Website | LinkedIn

2026

SDE Intern | Go, Pion, WebRTC, React, TypeScript, gRPC, S3, NEXTjs

- Built a production-grade **Selective Forwarding Unit (SFU)** in Go using Pion WebRTC with a dual **PeerConnection** architecture, independently negotiating SDP/ICE for media ingestion and subscriber distribution to avoid blocking renegotiations across publishers and subscribers.
- Decoupled the SFU into an independently deployable, horizontally scalable microservice, using **gRPC** for low-latency communication between SFU nodes and the Iris backend, with an application-level **scheduling algorithm** that assigns new rooms based on active room count and node CPU utilization.
- Eliminated unauthenticated node attachment to the media cluster by gating gRPC handshakes behind **mTLS** (mutual TLS) and per-node X.509 certificate validation.
- Built the Next.js video calling client used to validate and showcase the platform SDKs, implementing adaptive network optimization and seamless switching between SFU and mesh P2P topologies.
- Implemented cloud recording support via **AWS S3** compatible object storage, enabling scalable recording and playback of real-time sessions.

Projects

CloudPlay | AWS, Docker, GitHub Actions, Node.js, PostgreSQL, DrizzleORM | GitHub

In Progress

- Building a platform where users can deploy their React and Node.js apps to AWS without manually touching EC2 or ECS – just push code and it's live.
- Used Docker to containerize each deployment and ran them on ECS + Fargate; hooked up S3 and CloudFront so static files load faster instead of hitting the server every time.
- Added a log viewer so users can see their container logs in real time from the dashboard instead of logging into AWS Console.
- Wrote a GitHub Actions pipeline that handles the full build-deploy flow automatically – went from **8+ manual commands** to just a **git push**.

Connectly | React, Node.js, Express.js, Socket.IO, WebRTC | GitHub

2025

- Built a video and text chat app that randomly pairs two strangers – used WebRTC for the actual audio/video and Socket.IO to handle the signaling between them.
- Wrote the backend in Node.js + Express to manage rooms and match users; kept sessions separate so different pairs don't interfere with each other.

Contestify | React Native (Expo), Node.js, MongoDB, REST APIs | GitHub

2025

- Built a mobile app that pulls upcoming contests from **4+** platforms (Codeforces, CodeChef, LeetCode, AtCoder) so you don't have to check each site manually.
- Added login with JWT and reminders that notify you before a contest starts, with user data and preferences stored in MongoDB.

Technical Skills

Development: JavaScript • Golang • TypeScript • Node.js • NEXTjs • React • React Native (Expo)

Communication: Socket.IO • WebRTC • Pion • gRPC

DevOps: AWS • Docker • GitHub Actions • CI/CD • Vercel

Databases: PostgreSQL • MongoDB • DrizzleORM

Achievements

- 1st place** in D2D (Design to Develop) – inter-college website design and development competition, First Year category.
- Codeforces highest rating: **1124** (Pupil); CodeChef highest rating: **1479** (2-Star) – ranked **555th** globally in CodeChef Starters 192 and **1271st** in Starters 199.
