Education

Indian Institute of Information Technology Vadodara

Aug 2024 – Jun 2028

Bachelor of Technology in Computer Science and Engineering – 8.02 CGPA

Vadodara, Gujarat

IBS Global Academy (CBSE)

Apr 2022 – Mar 2024

Class XII – 89.8%

Gandhinagar, Gujarat

Experience

Confrence | [LinkedIn](#)

2025

Full Stack Intern | Go, Pion, WebRTC, React, TypeScript

- Built a production-grade **SFU** (Selective Forwarding Unit) in Go using Pion – implemented the dual **PeerConnection** pattern (used by companies like LiveKit) to separate ingest and egress paths, giving full independent control over each subscriber's media pipeline.
- Implemented a **mesh P2P architecture** in Go and Pion as an alternative topology, managing dynamic peer negotiation and renegotiation; built the accompanying React + TypeScript frontend.
- Used RTP transceivers for precise track-level control over send/receive direction and codec parameters.
- Owned WebRTC on the frontend end-to-end – handled SDP offer/answer flows, ICE candidate exchange via WebSockets, and transceiver-based media management to support seamless switching between SFU and P2P modes without page reloads.

Projects

CloudPloy | *AWS, Docker, GitHub Actions, Node.js, PostgreSQL, DrizzleORM* | [GitHub](#)

In Progress

- Building a platform where users can deploy their React and Node.js apps to AWS without manually touching EC2 or ECS – just push code and it's live.
- Used Docker to containerize each deployment and ran them on ECS + Fargate; hooked up S3 and CloudFront so static files load faster instead of hitting the server every time.
- Added a log viewer so users can see their container logs in real time from the dashboard instead of logging into AWS Console.
- Wrote a GitHub Actions pipeline that handles the full build-deploy flow automatically – went from **8+ manual commands** to just a `git push`.

Connectly | *React, Node.js, Express.js, Socket.IO, WebRTC* | [GitHub](#)

2024

- Built a video and text chat app that randomly pairs two strangers – used WebRTC for the actual audio/video and Socket.IO to handle the signaling between them.
- Wrote the backend in Node.js + Express to manage rooms and match users; kept sessions separate so different pairs don't interfere with each other.

Contestify | *React Native (Expo), Node.js, MongoDB, REST APIs* | [GitHub](#)

2024

- Built a mobile app that pulls upcoming contests from **4+** platforms (Codeforces, CodeChef, LeetCode, AtCoder) so you don't have to check each site manually.
- Added login with JWT and reminders that notify you before a contest starts, with user data and preferences stored in MongoDB.

Achievements

- **1st place** in D2D (Design to Develop) – inter-college website design and development competition, First Year category.
- Codeforces highest rating: **1124** (Pupil); CodeChef highest rating: **1479** (2-Star) – ranked **555th** globally in CodeChef Starters 192 and **1271st** in Starters 199.

Technical Skills

Backend: JavaScript • Golang • TypeScript • Node.js

Full-Stack: NEXTjs

Frontend: React • React Native (Expo)

Real-Time: Socket.IO • WebRTC • Pion • SFU Architecture

DevOps: AWS • Docker • GitHub Actions • CI/CD • Vercel

Databases: PostgreSQL • MongoDB • DrizzleORM
